

OS Installation Procedure

For this step we need following things:

- microSD card recommended size 32GB and above
- microSD card Reader
- Raspberry Imager software

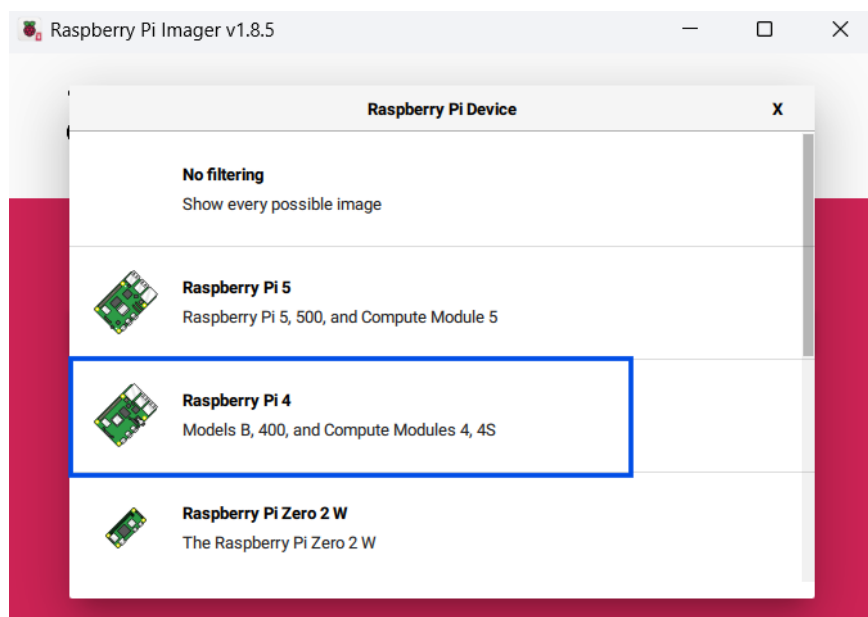

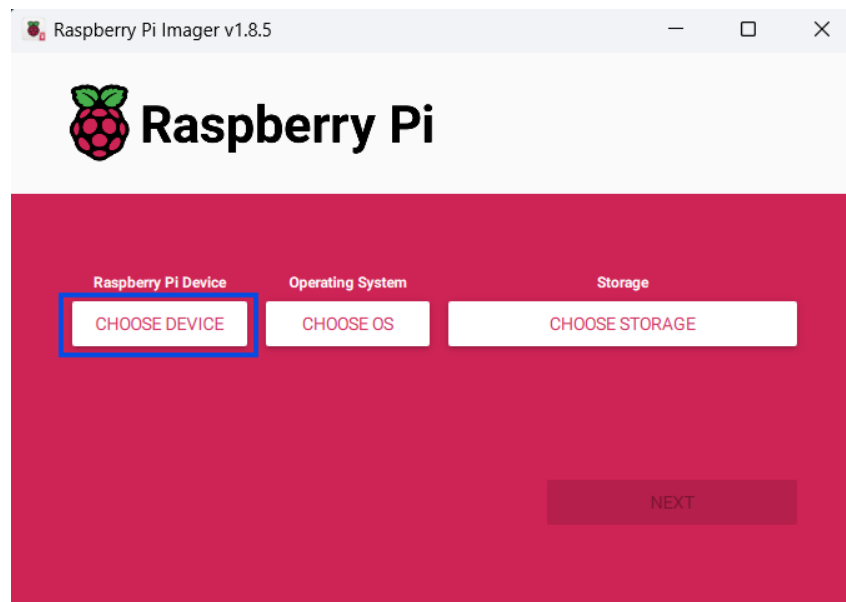

Insert card reader along with sdcard to PC/Laptop

Step 1: Download and install Raspberry Pi Imager from official link =>

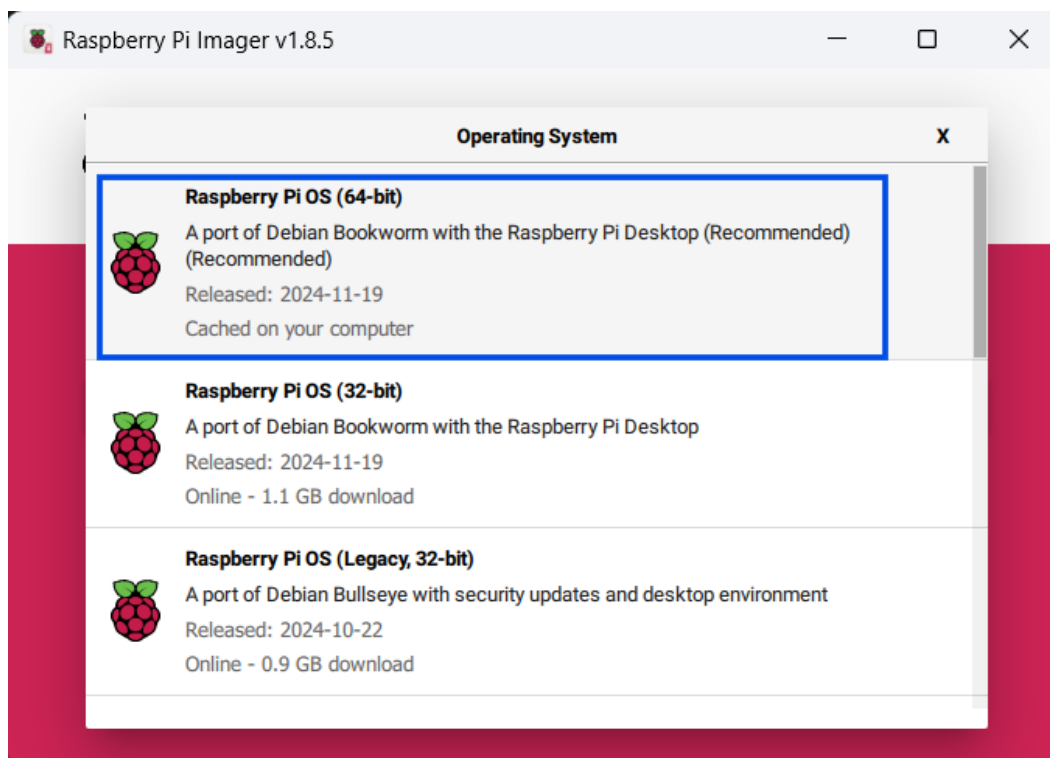

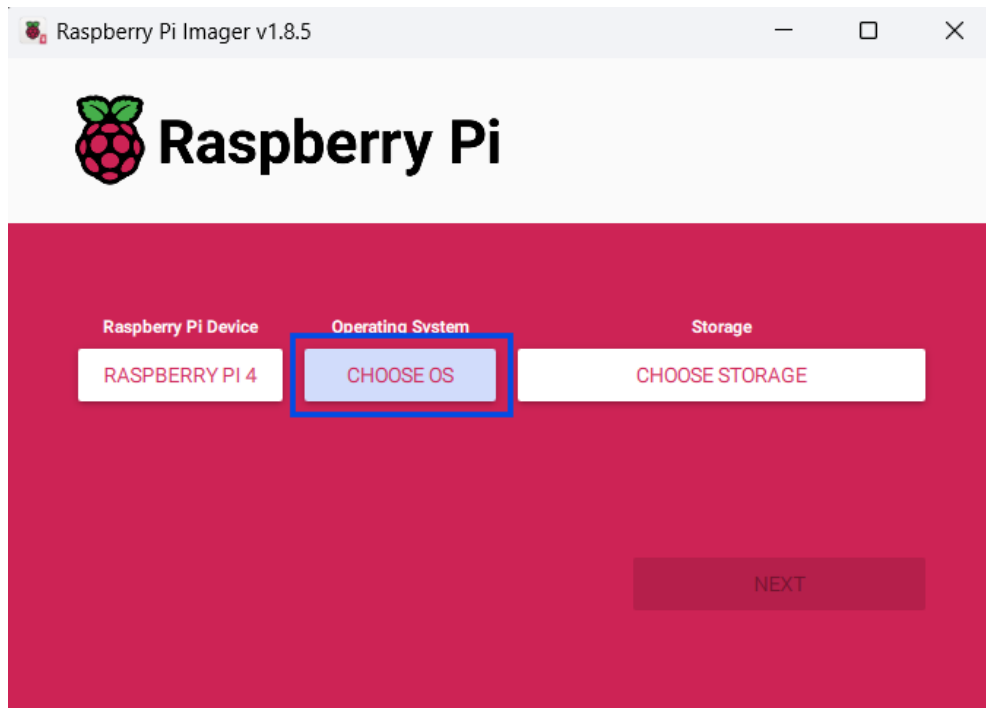

<https://www.raspberrypi.com/software/>

Once installed then open Raspberry Pi Imager software

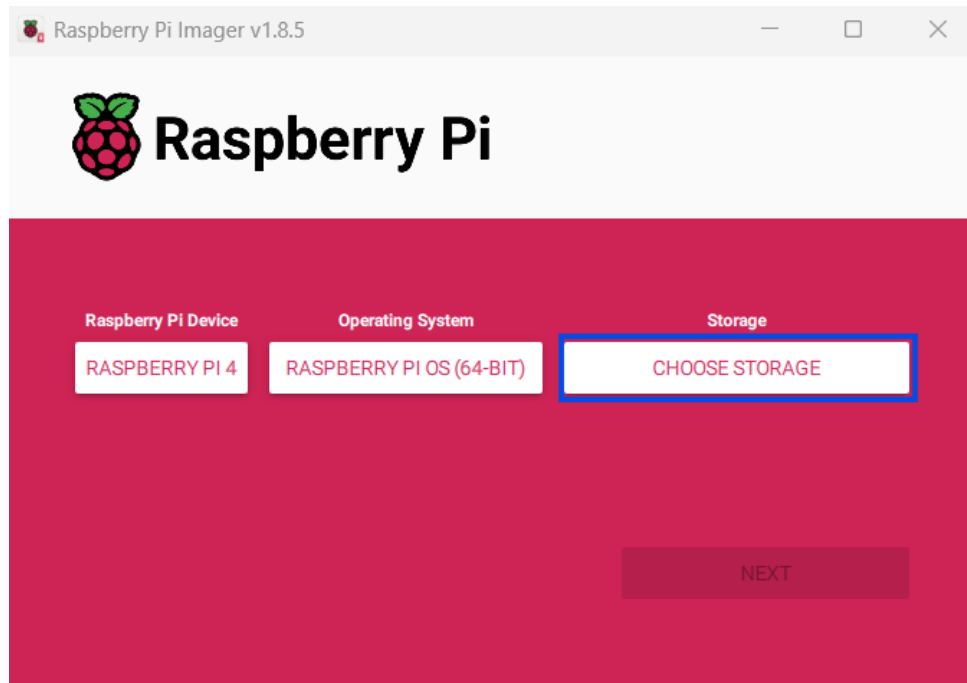

Step 2: You will have to select the correct Raspberry Pi device to use OS with, for example if using Raspberry Pi 4 then select.

Step 3: Now choose OS

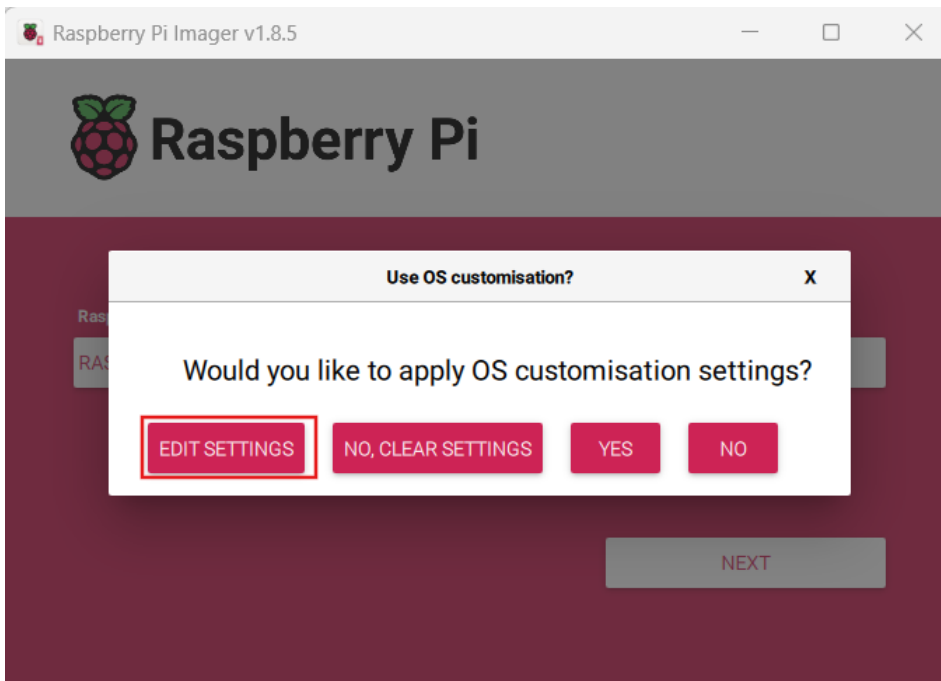

Step 4: Choose storage device, then click next

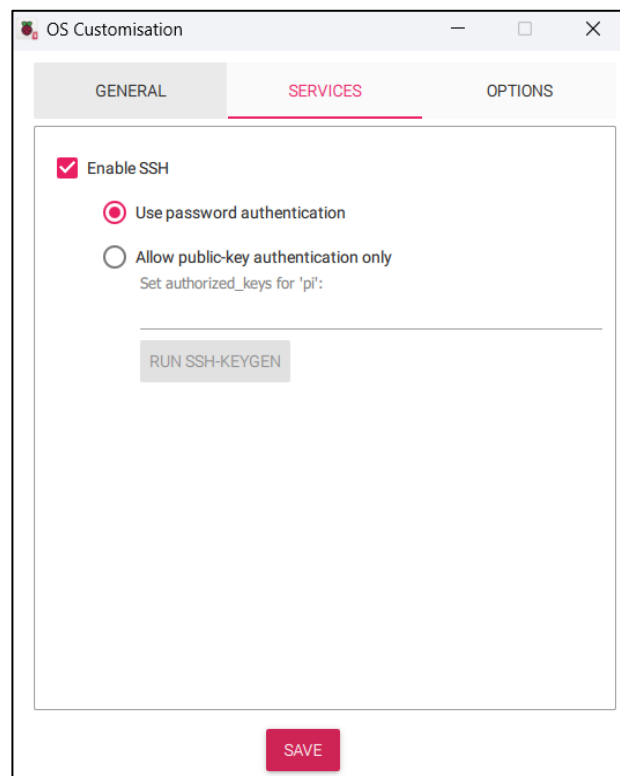

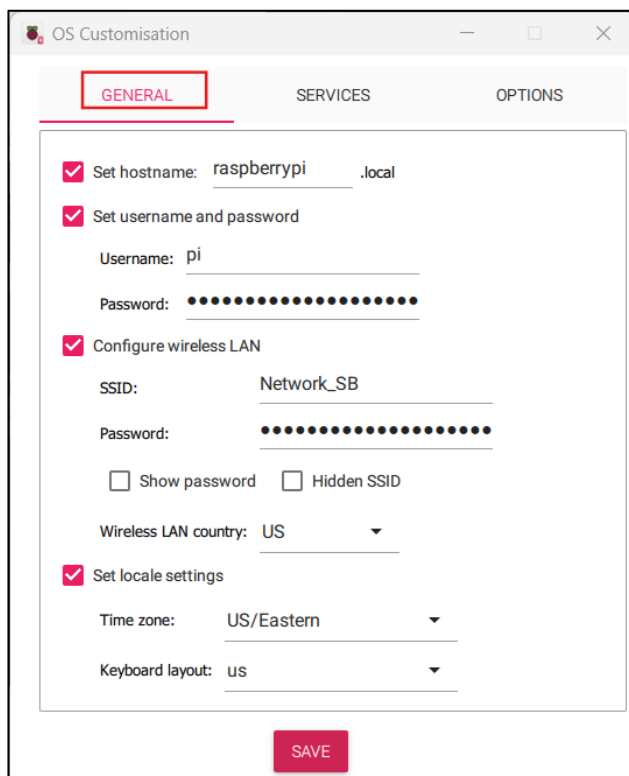

Step 5: Customization setting for login and remote access to Raspberry Pi.

Choose edit setting option to update or add various parameters,

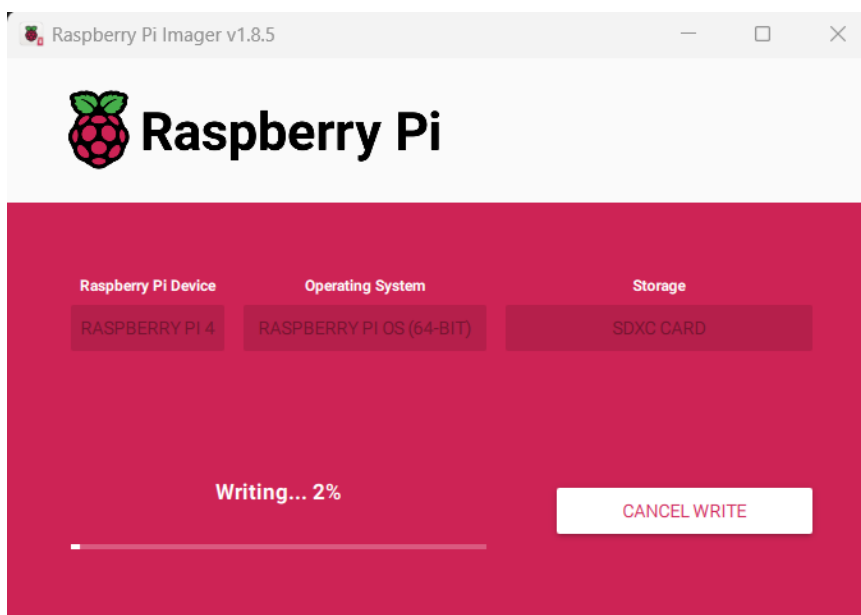

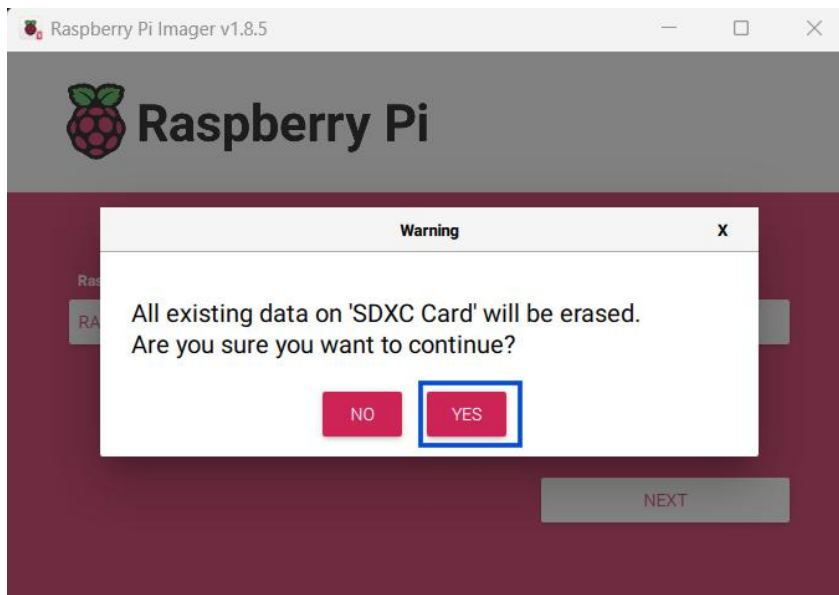

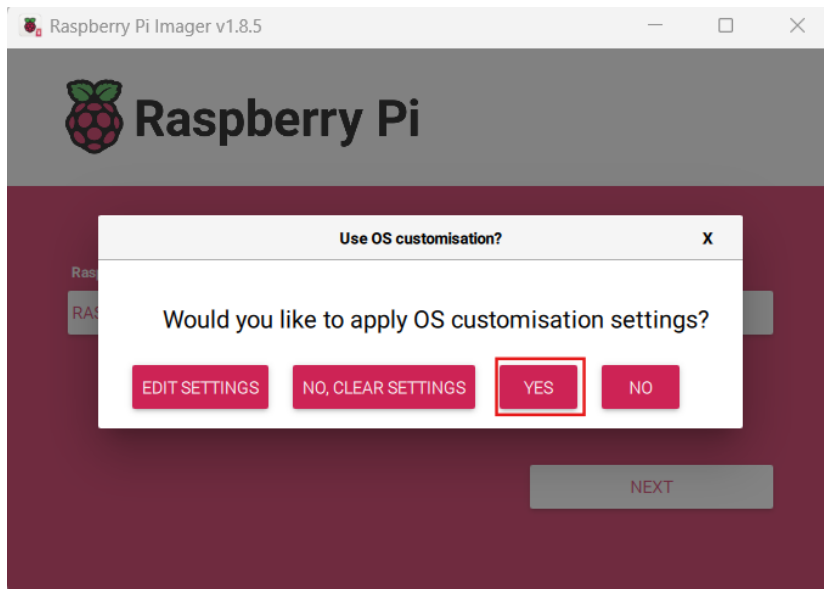

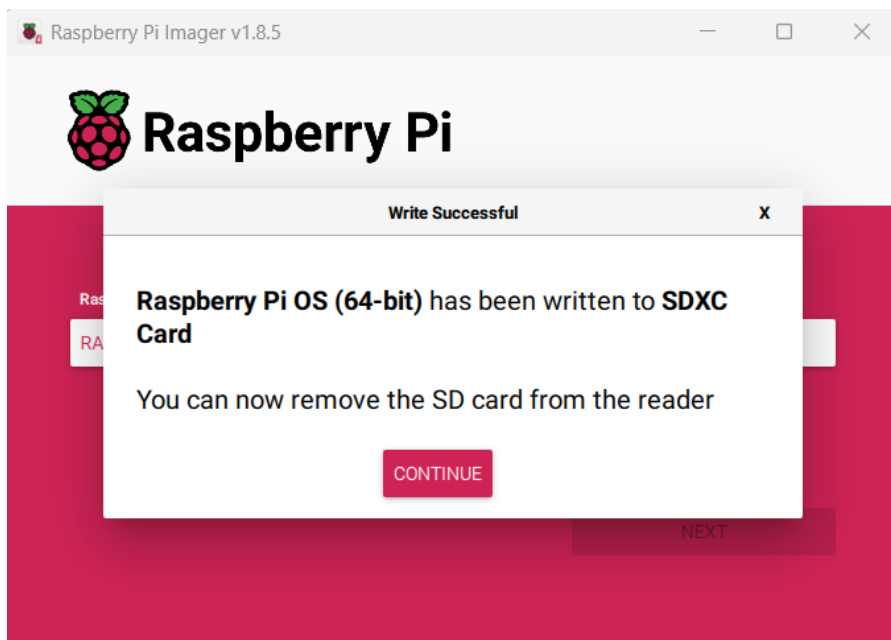

Setup **username** and **password** for raspberry pi login (default value is user – pi, password – raspberry). Add your network **SSID** and **password**, also set locale as per your region and save.

In service section enable SSH and save which is useful for remote access through PuTTY or VNC tools.

Once editing done apply setting with YES,

Now, when you power up raspberry it will automatically connect to your WiFi network and you can use any IP scanner software (like Advance IP scanner, angry IP scanner, etc.) to get IP address of raspberry pi.

Advanced IP Scanner

Remote access using PuTTY software

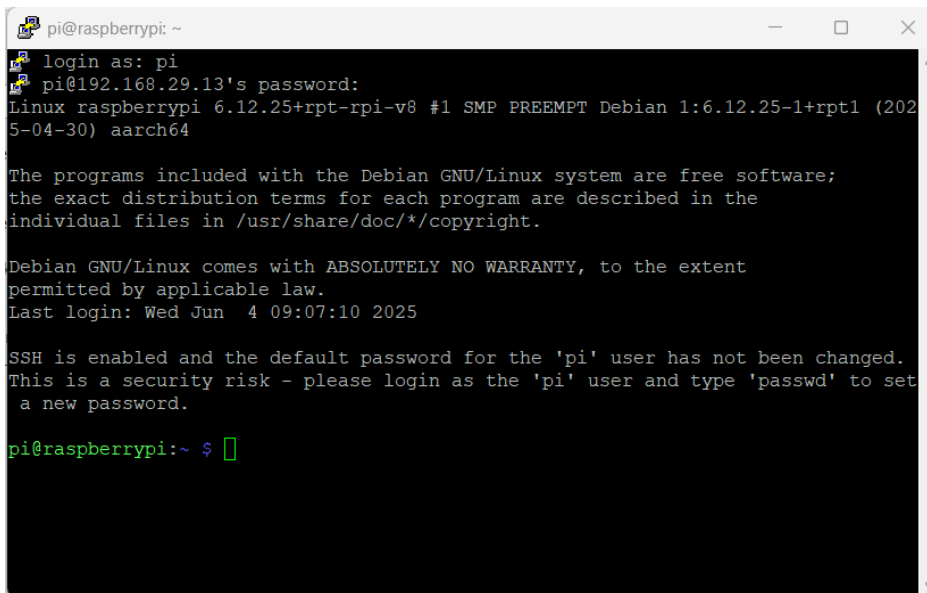

Default Login: **pi**, Password: **raspberrypi**

or use your login name and password if you set different

```
192.168.29.13 - PuTTY
login as: pi
pi@192.168.29.13's password: 
```

```
pi@raspberrypi: ~
login as: pi
pi@192.168.29.13's password:
Linux raspberrypi 6.12.25+rpt-rpi-v8 #1 SMP PREEMPT Debian 1:6.12.25-1+rpt1 (2025-04-30) aarch64

The programs included with the Debian GNU/Linux system are free software;
the exact distribution terms for each program are described in the

SSH is enabled and the default password for the 'pi' user has not been changed.
This is a security risk - please login as the 'pi' user and type 'passwd' to set
a new password.

pi@raspberrypi:~ $ 
```

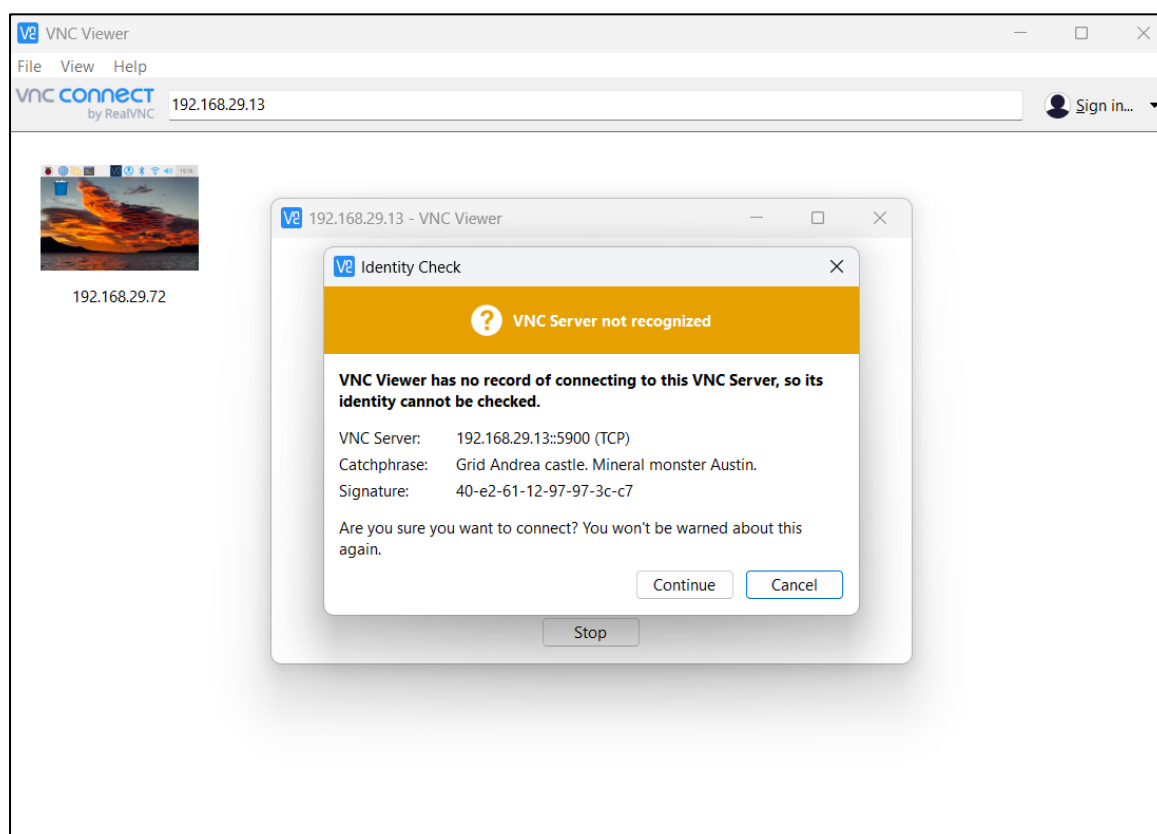

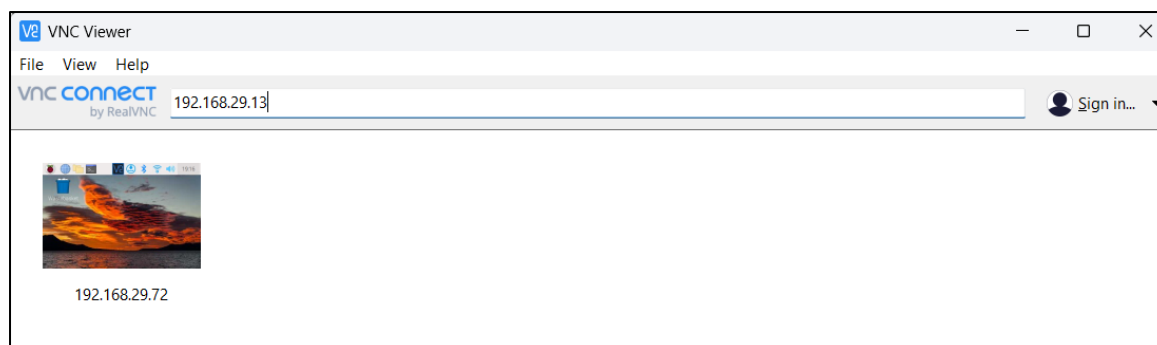

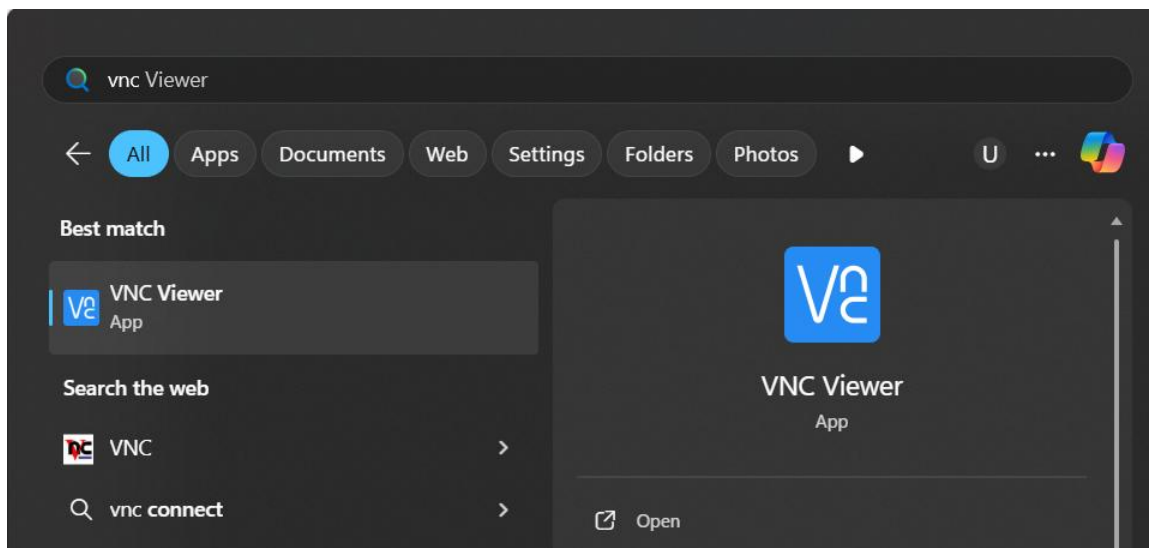

This allow you to access raspberry pi headless without need of keyboard mouse or screen from remote PC/Laptop. But only terminal access if you need GUI based follow next steps.

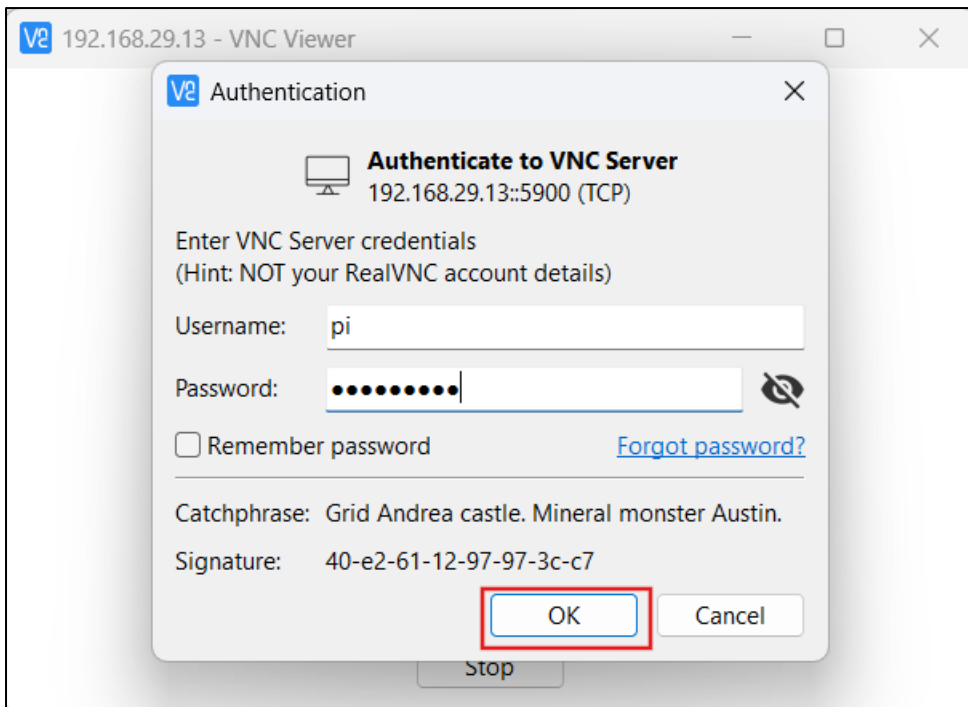

GUI Based Remote Access

To access GUI based control you can use VNC viewer on PC/laptop, but first you need to enable VNC server on Raspberry pi as shown below ->

\$ sudo raspi-config

So, this way you can easily access Raspberry Pi from your remote PC/laptop without need of keyboard or screen for your RPi.
